Meeting Handouts

## Handout for Markey IP Inn of Court (2/28)

### *Impression Prods., Inc. v. Lexmark Int'l, Inc.*

#### II. FACTS

- A. Lexmark makes and sells printers and toner cartridges, and owns several patents that cover the cartridges-at-issue.
- B. Lexmark sells "Regular Cartridges" at full price, and "Return Program Cartridges" ("RPCs") at a 20% discount.
- C. RPC sales are subject to a single-use / no-resale restriction; each RPC contains a microchip that prevents re-use of cartridges.
- D. Lexmark sells RPCs in the U.S. and abroad.
- E. Impression acquires used RPCs where the microchips are "hacked" by a 3rd party; Impression re-sells hacked RPCs in the U.S.
- F. Impression does not dispute that buyers have notice of single-use / no resale restriction when buying RPCs at the discounted price.
- G. Impression does not dispute infringement, validity of Lexmark's patents

#### III. PROCEDURAL BACKGROUND

##### A. District Court (S.D. Ohio)

- i. Granted Impression's motion to dismiss as to cartridges first sold by Lexmark in the U.S., concluding that "*Quanta* overruled *Mallinckrodt* sub silentio."
- ii. Denied Impression's motion to dismiss as to cartridges first sold by Lexmark outside the U.S., concluding that *Jazz Photo* is still good law and *Kirtsaeng* is inapposite.

##### B. Federal Circuit (en banc)

- i. **REVERSES:** "[A] patentee, when selling a patented article subject to a single-use/no-resale restriction that is lawful and clearly communicated to the purchaser, does not by that sale give the buyer, or downstream buyers, the resale/reuse authority that has been expressly denied."
- ii. **AFFIRMS:** "[A] U.S. patentee, merely by selling or authorizing the sale of a U.S.-patented article abroad, does not authorize the buyer to import the article and sell and use it in the U.S., which are infringing acts in the absence of patentee-conferred authority."

Handout for Markey IP Inn of Court (2/28)

*Impression Prods., Inc. v. Lexmark Int'l, Inc.*

I. QUESTIONS PRESENTED

Petitioner Impression Prods., Inc.	Respondent Lexmark Int'l, Inc.
<p>1. Whether a sale that transfers title to the patented item while specifying post-sale restrictions on the article's use or resale avoids application of the patent exhaustion doctrine and therefore permits the enforcement of such post-sale restrictions through the patent law's infringement remedy.</p>	<p>1. Whether the sale of a patented article subject to an express contractual agreement conveying only limited authority to use that article nonetheless automatically confers unlimited authority to sell, offer to sell, use, and import that article.</p>
<p>2. Whether, in light of this Court's holding in <i>Kirtsaeng v. John Wiley &amp; Sons, Inc.</i>, that the common law doctrine barring restraints on alienation that is the basis of exhaustion doctrine "makes no geographical distinctions," a sale of a patented article – authorized by the U.S. patentee – that takes place outside of the United States exhausts the U.S. patent rights in that article.</p>	<p>2. Whether every sale of a patented article outside the United States automatically confers unlimited authority to import, sell, offer to sell, and use that article in the United States.</p>

Opinion of the Court

NOTICE: This opinion is subject to formal revision before publication in the preliminary print of the United States Reports. Readers are requested to notify the Reporter of Decisions, Supreme Court of the United States, Washington, D. C. 20543, of any typographical or other formal errors, in order that corrections may be made before the preliminary print goes to press.

**SUPREME COURT OF THE UNITED STATES**

No. 14–1538

**LIFE TECHNOLOGIES CORPORATION, ET AL.,  
PETITIONERS *v.* PROMEGA CORPORATION**

**ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF  
APPEALS FOR THE FEDERAL CIRCUIT**

[February 22, 2017]

JUSTICE SOTOMAYOR delivered the opinion of the Court.

This case concerns the intersection of international supply chains and federal patent law. Section 271(f)(1) of the Patent Act of 1952 prohibits the supply from the United States of “all or a substantial portion” of the components of a patented invention for combination abroad. 35 U. S. C. §271(f)(1). We granted certiorari to determine whether a party that supplies a single component of a multicomponent invention for manufacture abroad can be held liable for infringement under §271(f)(1). 579 U. S. \_\_\_\_ (2016). We hold that a single component does not constitute a substantial portion of the components that can give rise to liability under §271(f)(1). Because only a single component of the patented invention at issue here was supplied from the United States, we reverse and remand.

I  
A

We begin with an overview of the patent in dispute. Although the science behind the patent is complex, a basic understanding suffices to resolve the question presented

## Opinion of the Court

by this case.

The Tautz patent, U. S. Reissue Patent No. RE 37,984, claims a toolkit for genetic testing.<sup>1</sup> The kit is used to take small samples of genetic material—in the form of nucleotide sequences that make up the molecule deoxyribonucleic acid (commonly referred to as “DNA”)—and then synthesize multiple copies of a particular nucleotide sequence. This process of copying, known as amplification, generates DNA profiles that can be used by law enforcement agencies for forensic identification and by clinical and research institutions around the world. For purposes of this litigation, the parties agree that the kit covered by the Tautz patent contains five components: (1) a mixture of primers that mark the part of the DNA strand to be copied; (2) nucleotides for forming replicated strands of DNA; (3) an enzyme known as *Taq* polymerase; (4) a buffer solution for the amplification; and (5) control DNA.<sup>2</sup>

Respondent Promega Corporation was the exclusive licensee of the Tautz patent. Petitioner Life Technologies Corporation manufactured genetic testing kits.<sup>3</sup> During the timeframe relevant here, Promega sublicensed the Tautz patent to Life Technologies for the manufacture and sale of the kits for use in certain licensed law enforcement fields worldwide. Life Technologies manufactured all but one component of the kits in the United Kingdom. It manufactured that component—the *Taq* polymerase—in

---

<sup>1</sup>The Tautz patent expired in 2015. The litigation thus concerns past acts of infringement only.

<sup>2</sup>Because the parties here agree that the patented invention is made up of only these five components, we do not consider how to identify the “components” of a patent or whether and how that inquiry relates to the elements of a patent claim.

<sup>3</sup>Applied Biosystems, LLC, and Invitrogen IP Holdings, Inc., are also petitioners in this proceeding and are wholly owned subsidiaries of Life Technologies Corporation. The agreement at issue here was originally between Promega and Applied Biosystems. 773 F. 3d 1338, 1344, n. 3 (CA Fed. 2014).

## Opinion of the Court

the United States. Life Technologies shipped the *Taq* polymerase to its United Kingdom facility, where it was combined with the other four components of the kit.

Four years into the agreement, Promega sued Life Technologies on the grounds that Life Technologies had infringed the patent by selling the kits outside the licensed fields of use to clinical and research markets. As relevant here, Promega alleged that Life Technologies' supply of the *Taq* polymerase from the United States to its United Kingdom manufacturing facilities triggered liability under §271(f)(1).

## B

At trial, the parties disputed the scope of §271(f)(1)'s prohibition against supplying all or a substantial portion of the components of a patented invention from the United States for combination abroad. Section 271(f)(1)'s full text reads:

“Whoever without authority supplies or causes to be supplied in or from the United States all or a substantial portion of the components of a patented invention, where such components are uncombined in whole or in part, in such manner as to actively induce the combination of such components outside of the United States in a manner that would infringe the patent if such combination occurred within the United States, shall be liable as an infringer.”

The jury returned a verdict for Promega, finding that Life Technologies had willfully infringed the patent. Life Technologies then moved for judgment as a matter of law, contending that §271(f)(1) did not apply to its conduct because the phrase “all or a substantial portion” does not encompass the supply of a single component of a multi-component invention.

The District Court granted Life Technologies' motion.

## Opinion of the Court

The court agreed that there could be no infringement under §271(f)(1) because Promega's evidence at trial "showed at most that *one* component of all of the accused products, [the *Taq*] polymerase, was supplied from the United States." 2012 WL 12862829, \*3 (WD Wis., Sept. 13, 2012) (Crabb, J.). Section 271(f)(1)'s reference to "a substantial portion of the components," the District Court ruled, does not embrace the supply of a single component. *Id.*, at \*5.

The Court of Appeals for the Federal Circuit reversed and reinstated the jury's verdict finding Life Technologies liable for infringement.<sup>4</sup> 773 F. 3d 1338, 1353 (2014). As relevant here, the court held that "there are circumstances in which a party may be liable under §271(f)(1) for supplying or causing to be supplied a single component for combination outside the United States." *Ibid.* The Federal Circuit concluded that the dictionary definition of "substantial" is "important" or "essential," which it read to suggest that a single important component can be a "substantial portion of the components" of a patented invention. *Ibid.* Relying in part on expert trial testimony that the *Taq* polymerase is a "main" and "major" component of the kits, the court ruled that the single *Taq* polymerase component was a substantial component as the term is used in §271(f)(1). *Id.*, at 1356.

## II

The question before us is whether the supply of a single component of a multicomponent invention is an infringing act under 35 U. S. C. §271(f)(1). We hold that it is not.

---

<sup>4</sup>Chief Judge Prost dissented from the majority's conclusion with respect to the "active inducement" element of 35 U. S. C. §271(f)(1). 773 F. 3d, at 1358–1360. Neither that question, nor any of the Federal Circuit's conclusions regarding Life Technologies' liability under §271(a) or infringement of four additional Promega patents, see *id.*, at 1341, is before us. See 579 U. S. \_\_\_\_ (2016).

## Opinion of the Court

## A

The threshold determination to be made is whether §271(f)(2)'s requirement of "a substantial portion" of the components of a patented invention refers to a quantitative or qualitative measurement. Life Technologies and the United States argue that the text of §271(f)(1) establishes a quantitative threshold, and that the threshold must be greater than one. Promega defends the Federal Circuit's reading of the statute, arguing that a "substantial portion" of the components includes a single component if that component is sufficiently important to the invention.

We look first to the text of the statute. *Sebelius v. Cloer*, 569 U. S. \_\_\_, \_\_\_ (2013) (slip op., at 6). The Patent Act itself does not define the term "substantial," and so we turn to its ordinary meaning. *Ibid.* Here we find little help. All agree the term is ambiguous and, taken in isolation, might refer to an important portion or to a large portion. Brief for Petitioners 16; Brief for Respondent 18; Brief for United States as *Amicus Curiae* 12. "Substantial," as it is commonly understood, may refer either to qualitative importance or to quantitatively large size. See, e.g., Webster's Third New International Dictionary 2280 (defs. 1c, 2c) (1981) (Webster's Third) ("important, essential," or "considerable in amount, value, or worth"); 17 Oxford English Dictionary 67 (defs. 5a, 9) (2d ed. 1989) (OED) ("That is, constitutes, or involves an essential part, point, or feature; essential, material," or "Of ample or considerable amount, quantity, or dimensions").

The context in which "substantial" appears in the statute, however, points to a quantitative meaning here. Its neighboring terms are the first clue. "[A] word is given more precise content by the neighboring words with which it is associated." *United States v. Williams*, 553 U. S. 285, 294 (2008). Both "all" and "portion" convey a quantitative meaning. "All" means the entire quantity, without refer-

## Opinion of the Court

ence to relative importance. See, e.g., Webster's Third 54 (defs. 1a, 2a, 3) ("that is the whole amount or quantity of," or "every member or individual component of," or "the whole number or sum of"); 1 OED 324 (def. 2) ("The entire number of; the individual components of, without exception"). "Portion" likewise refers to some quantity less than all. Webster's Third 1768 (defs. 1, 3a) ("an individual's part or share of something," or "a part of a whole"); 12 OED 154, 155 (def. 1a, 5a) ("The part (of anything) allotted or belonging to one person," or "A part of any whole"). Conversely, there is nothing in the neighboring text to ground a qualitative interpretation.

Moreover, the phrase "substantial portion" is modified by "of the components of a patented invention." It is the supply of all or a substantial portion "of the components" of a patented invention that triggers liability for infringement. But if "substantial" has a qualitative meaning, then the more natural way to write the opening clause of the provision would be to not reference "the components" at all. Instead, the opening clause of §271(f)(1) could have triggered liability for the supply of "all or a substantial portion of . . . a patented invention, where [its] components are uncombined in whole or in part." A qualitative reading would render the phrase "of the components" unnecessary the first time it is used in §271(f)(1). Whenever possible, however, we should favor an interpretation that gives meaning to each statutory provision. See *Hibbs v. Winn*, 542 U. S. 88, 101 (2004). Only the quantitative approach does so here. Thus, "substantial," in the context of §271(f)(1), is most reasonably read to connote a quantitative measure.

Promega argues that a quantitative approach is too narrow, and invites the Court to instead adopt a "case-specific approach" that would require a factfinder to decipher whether the components at issue are a "substantial portion" under *either* a qualitative or quantitative test.

## Opinion of the Court

Brief for Respondent 17, 42. We decline to do so. Having determined the phrase “substantial portion” is ambiguous, our task is to resolve that ambiguity, not to compound it by tasking juries across the Nation with interpreting the meaning of the statute on an ad hoc basis. See, e.g., *Robinson v. Shell Oil Co.*, 519 U. S. 337, 345–346 (1997).

As a more general matter, moreover, we cannot accept Promega’s suggestion that the Court adopt a different analytical framework entirely—one that accounts for both the quantitative *and* qualitative aspects of the components. Promega reads §271(f)(1) to mean that the answer to whether a given portion of the components is “substantial” depends not only on the number of components involved but also on their qualitative importance to the invention overall. At first blush, there is some appeal to the idea that, in close cases, a subjective analysis of the qualitative importance of a component may help determine whether it is a “substantial portion” of the components of a patent. But, for the reasons discussed above, the statute’s structure provides little support for a qualitative interpretation of the term.<sup>5</sup>

Nor would considering the qualitative importance of a component necessarily help resolve close cases. To the contrary, it might just as easily complicate the factfinder’s review. Surely a great many components of an invention (if not every component) are important. Few inventions, including the one at issue here, would function at all without any one of their components. Indeed, Promega has not identified any component covered by the Tautz

---

<sup>5</sup>The examples Promega provides of other statutes’ use of the terms “substantial” or “significant” are inapposite. See Brief for Respondent 19–20. The text of these statutes, which arise in different statutory schemes with diverse purposes and structures, differs in material ways from the text of §271(f)(1). The Tax Code, for instance, refers to “a substantial portion of a return,” 26 U. S. C. §7701(a)(36)(A), not to “a substantial portion of the entries of a return.”

## Opinion of the Court

patent that would not satisfy Promega's "importance" litmus test.<sup>6</sup> How are courts—or, for that matter, market participants attempting to avoid liability—to determine the relative importance of the components of an invention? Neither Promega nor the Federal Circuit offers an easy way to make this decision. Accordingly, we conclude that a quantitative interpretation hews most closely to the text of the statute and provides an administrable construction.

## B

Having determined that the term "substantial portion" refers to a quantitative measurement, we must next decide whether, as a matter of law, a single component can ever constitute a "substantial portion" so as to trigger liability under §271(f)(1). The answer is no.

As before, we begin with the text of the statute. Section 271(f)(1) consistently refers to "components" in the plural. The section is targeted toward the supply of all or a substantial portion "of the *components*," where "such *components*" are uncombined, in a manner that actively induces the combination of "such *components*" outside the United States. Text specifying a substantial portion of "components," plural, indicates that multiple components constitute the substantial portion.

The structure of §271(f) reinforces this reading. Section 271(f)(2), which is §271(f)(1)'s companion provision, reads as follows:

"Whoever without authority supplies or causes to be supplied in or from the United States any component of a patented invention that is especially made or especially adapted for use in the invention and not a staple article or commodity of commerce suitable for

---

<sup>6</sup>Life Technologies' expert described the *Taq* polymerase as a "main" component. App. 160. The expert also described two other components the same way. *Ibid.*

## Opinion of the Court

substantial noninfringing use, where such component is uncombined in whole or in part, knowing that such component is so made or adapted and intending that such component will be combined outside of the United States in a manner that would infringe the patent if such combination occurred within the United States, shall be liable as an infringer.”

Reading §271(f)(1) to refer to more than one component allows the two provisions to work in tandem. Whereas §271(f)(1) refers to “components,” plural, §271(f)(2) refers to “any component,” singular. And, whereas §271(f)(1) speaks to whether the components supplied by a party constitute a substantial portion of the components, §271(f)(2) speaks to whether a party has supplied “any” noncommodity component “especially made or especially adapted for use in the invention.”

We do not disagree with the Federal Circuit’s observation that the two provisions concern different scenarios. See 773 F. 3d, at 1354. As this Court has previously observed, §§271(f)(1) and 271(f)(2) “differ, among other things, on the quantity of components that must be ‘supply[ed] . . . from the United States’ for liability to attach.” *Microsoft Corp. v. AT&T Corp.*, 550 U. S. 437, 454, n. 16 (2007). But we do not draw the Federal Circuit’s conclusion from these different but related provisions. Reading §271(f)(1) to cover *any* single component would not only leave little room for §271(f)(2), but would also undermine §271(f)(2)’s express reference to a single component “especially made or especially adapted for use in the invention.”<sup>7</sup> Our conclusion that §271(f)(1) prohibits the supply of components, plural, gives each subsection its unique

---

<sup>7</sup>This Court’s opinion in *Microsoft Corp. v. AT&T Corp.*, 550 U. S. 437, 447 (2007), is not to the contrary. The holding in that case turned not on the number of components involved, but rather on whether the software at issue was a component at all.

## Opinion of the Court

application.<sup>8</sup> See, e.g., *Cloer*, 569 U. S., at \_\_\_ (slip op., at 6).

Taken alone, §271(f)(1)'s reference to "components" might plausibly be read to encompass "component" in the singular. See 1 U. S. C. §1 (instructing that "words importing the plural include the singular," "unless the context indicates otherwise"). But §271(f)'s text, context, and structure leave us to conclude that when Congress said "components," plural, it meant plural, and when it said "component," singular, it meant singular.

We do not today define how close to "all" of the components "a substantial portion" must be. We hold only that one component does not constitute "all or a substantial portion" of a multicomponent invention under §271(f)(1). This is all that is required to resolve the question presented.

## C

The history of §271(f) bolsters our conclusion. The Court has previously observed that Congress enacted §271(f) in response to our decision in *Deepsouth Packing Co. v. Laitram Corp.*, 406 U. S. 518 (1972). See *Microsoft Corp.*, 550 U. S., at 444. In *Deepsouth*, the Court determined that, under patent law as it existed at the time, it was "not an infringement to make or use a patented product outside of the United States." 406 U. S., at 527. The

---

<sup>8</sup>Promega argues that the important distinction between these provisions is that §271(f)(1), unlike §271(f)(2), requires a showing of specific intent for active inducement. Brief for Respondent 34–41. But cf. *Global-Tech Appliances, Inc. v. SEB S. A.*, 563 U. S. 754, 765–766 (2011) (substantially equating the intent requirements for §§271(b) and 271(c), on which Promega asserts §§271(f)(1) and (f)(2) were modeled). But, to repeat, whatever intent subsection (f)(1) may require, it also imposes liability only on a party who supplies a "substantial portion of the components" of the invention. Thus, even assuming that subsection (f)(1)'s "active inducement" requirement is different from subsection (f)(2)'s "knowing" and "intending" element—a question we do not reach today—that difference between the two provisions does not read the "substantial portion" language out of the statute.

## Opinion of the Court

new §271(f) “expand[ed] the definition of infringement to include supplying from the United States a patented invention’s components,” as outlined in subsections (f)(1) and (f)(2). *Microsoft*, 550 U. S., at 444–445.

The effect of this provision was to fill a gap in the enforceability of patent rights by reaching components that are manufactured in the United States but assembled overseas and that were beyond the reach of the statute in its prior formulation. Our ruling today comports with Congress’ intent. A supplier may be liable under §271(f)(1) for supplying from the United States all or a substantial portion of the components (plural) of the invention, even when those components are combined abroad. The same is true even for a single component under §271(f)(2) if it is especially made or especially adapted for use in the invention and not a staple article or commodity. We are persuaded, however, that when as in this case a product is made abroad and all components but a single commodity article are supplied from abroad, this activity is outside the scope of the statute.

## III

We hold that the phrase “substantial portion” in 35 U. S. C. §271(f)(1) has a quantitative, not a qualitative, meaning. We hold further that §271(f)(1) does not cover the supply of a single component of a multicomponent invention. The judgment of the Court of Appeals for the Federal Circuit is therefore reversed, and the case is remanded for further proceedings consistent with this opinion.

*It is so ordered.*

THE CHIEF JUSTICE took no part in the decision of this case.

Opinion of ALITO, J.

**SUPREME COURT OF THE UNITED STATES**

No. 14–1538

LIFE TECHNOLOGIES CORPORATION, ET AL.,  
PETITIONERS *v.* PROMEGA CORPORATION

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF  
APPEALS FOR THE FEDERAL CIRCUIT

[February 22, 2017]

JUSTICE ALITO, with whom JUSTICE THOMAS joins,  
concurring in part and concurring in the judgment.

I join all but Part II–C of the Court’s opinion. It is clear from the text of 35 U. S. C. §271(f) that Congress intended not only to fill the gap created by *Deepsouth Packing Co. v. Laitram Corp.*, 406 U. S. 518 (1972)—where all of the components of the invention were manufactured in the United States, *id.*, at 524—but to go at least a little further. How much further is the question in this case, and the genesis of §271(f) sheds no light on that question.

I note, in addition, that while the Court holds that a single component cannot constitute a substantial portion of an invention’s components for §271(f)(1) purposes, I do not read the opinion to suggest that *any* number greater than one is sufficient. In other words, today’s opinion establishes that more than one component is necessary, but does not address *how much* more.

*TC Heartland v. Kraft -- Audience Handout*

**Question Presented:** "Whether 28 U.S.C. § 1400(b) is the sole and exclusive provision governing venue in patent infringement actions and is not to be supplemented by 28 U.S.C. § 1391(c)."

**28 U.S.C. § 1400(b) provides:**

Any civil action for patent infringement may be brought in the judicial district where the defendant resides, or where the defendant has committed acts of infringement and has a regular and established place of business.

**28 U.S.C. § 1391. Venue generally**

(a) Applicability of section. **Except as otherwise provided by law--**

(1) this section shall govern the venue of all civil actions brought in district courts of the United States; . . . .

(b) Venue in general. A civil action may be brought in--

(1) a judicial district in which any defendant resides, if all defendants are residents of the State in which the district is located;

. . . .

(c) Residency. **For all venue purposes--**

(2) [corporate entity] . . . . shall be deemed to reside, if a defendant, in any judicial district in which such defendant is **subject to the court's personal jurisdiction . . . .**

**Evolution of Section 1391:**

**1988 Version:** For purposes of venue under this chapter, a defendant that is a corporation shall be deemed to reside in any judicial district in which it is subject to personal jurisdiction at the time the action is commenced.

**Pre 1988 Version:** A corporation may be sued in any judicial district in which it is incorporated or licensed to do business or is doing business, and such judicial district shall be regarded as the residence of such corporation **for venue purposes.**
